

TRUST

Without *exaggeration.*

Trust is not a list of certifications. Trust is what the system does when no one is watching, and how it explains itself when challenged.

FOR DOCTORS, PATIENTS, AND REGULATORS

[veltrahealth.com / trust](https://veltrahealth.com/trust)

Trust is not a badge.

Healthcare software has earned its reputation for overpromising. Every product page shows the same row of compliance logos. HIPAA. SOC 2. GDPR. PDPL. The logos have become wallpaper. They mean the company passed an audit. They do not mean the company can be trusted. We do not intend to add to that wallpaper.

Trust is not a certificate on a wall. Trust is what happens at 2 AM on a Sunday, when a patient asks to be forgotten, and the system forgets them — not because a regulator demanded it, but because forgetting is what memory is supposed to do. Trust is what happens when a doctor asks *why did you surface this*, and the system answers, in plain language, with the chain of observations that led to the recommendation. Trust is what happens when the system makes a mistake, and the doctor corrects it, and the system does not silently update its model of reality. It records the correction. It does not generalize from a single error.

We are not going to list twenty certifications on this page. We are going to list five things Veltra does, and five things Veltra does not do. The certifications are real, and they are listed once, at the bottom, in small type. The five things are the contract.

What Veltra does.

PROMISE 01

Veltra explains itself.

If Veltra surfaces a recommendation, the doctor can ask *why*. Veltra will answer — in plain language, with the chain of observations that produced the conclusion. A memory that cannot be challenged is a rumor. A memory that can be challenged, traced, corrected, and refused is a colleague. This is the line.

PROMISE 02

Veltra forgets on purpose.

When a patient asks to be forgotten under PDPL Article 18, Veltra does not archive. Veltra does not soft-delete. Veltra erases the patient's identity, their appointments, their records, their contact details. The patterns they contributed to the collective memory survive, in anonymized, irreversible aggregate. The memory of "patients like this one" survives. The memory of "this patient" does not. This is what memory actually means.

PROMISE 03

Veltra does not override the doctor.

When Memory disagrees with the doctor, the doctor wins. Always. If Memory is right, the doctor will see it in time. If Memory is wrong, the doctor's instinct is the safety net. A Chief of Staff who overrules the doctor is not a Chief of Staff. It is a liability. This is non-negotiable.

PROMISE 04

Veltra does not learn from a single error.

When a doctor revises a diagnosis, Veltra records the revision. It surfaces the revision in the patient's timeline. It does not silently update its model of "what this symptom usually means." Generalizing from a single error is how bias enters a system. Memory is humble by design.

PROMISE 05

Veltra does not sell data. Ever.

Patient data is not a revenue stream. It is not a training set for a future product. It is not shared with partners, advertisers, researchers, or affiliates. The data your clinic generates stays in your clinic's tenancy, encrypted at rest with keys you control. The collective memory across clinics is computed on anonymized, irreversible aggregates. The raw record never leaves the clinic. This is a promise, not a setting.

III — Five Refusals

What Veltra does not do.

REFUSAL 01

Veltra does not sell, share, or license patient data.

Not to insurers. Not to pharmaceutical companies. Not to research institutions without explicit, written, patient-level consent obtained by the clinic — not by Veltra. There is no "anonymized data partnership" line item in our business model. There never will be.

REFUSAL 02

Veltra does not use patient data to train third-party models.

Veltra's memory is computed within your clinic's tenancy. Patterns that span clinics are computed on irreversible aggregates — never on raw records. We do not feed your patients' data into a foundation model owned by anyone, including ourselves.

REFUSAL 03

Veltra does not deploy black-box recommendations.

Every recommendation has a trace. Every trace is reviewable. If a recommendation cannot be explained in plain language to a doctor, it does not ship. We have refused features in the past for this reason. We will refuse them in the future.

REFUSAL 04

Veltra does not market using patient outcomes.

No testimonials with patient counts. No case studies that identify clinics without their written consent. No "powered by" badges on partner sites. The clinic's success belongs to the clinic.

REFUSAL 05

Veltra does not lock you in.

Your data is yours. Export it anytime, in standard formats. Cancel anytime. We do not hold migrations hostage. We do not charge exit fees. If you leave, we will help you leave. That is what trust looks like at the end of the relationship, which is when it matters most.

IV — The Specifics

The certifications, in small type.

We said we would list them once, at the bottom, in small type. Here they are. They are real. They are audited. They are necessary. They are not sufficient. The five promises above are the contract. The certifications below are the receipts.

ENCRIPTION IN TRANSIT TLS 1.3	ENCRIPTION AT REST AES-256
ACCESS CONTROL Role-based · Per-tenant	AUDIT LOGGING Immutable · 7-year retention
DATA RESIDENCY KSA · UAE · EU (per tenant)	DELETION (PDPL ART. 18) Within 30 days · Cryptographic erase
SUBPROCESSORS Published list · 30-day notice	COMPLIANCE REPORTS HIPAA · SOC 2 Type II · PDPL

*"A memory that cannot
be challenged is a rumor.
A memory that can be
challenged is a colleague."*
